SUMMARY

An Informatics Engineering student at Batam State Polytechnic with a strong interest in software engineering and software development. Passionate about building a solid foundation in programming through clean code practices, structured programming, and simple yet well-planned system design. Currently focused on improving problem-solving abilities, software architecture understanding, and maintainable application development for long-term growth in the IT industry.

EDUCATION

Permata Harapan School 2 <i>Software Engineering</i>	Batam, Indonesia 2021-2024
Batam State Polytechnic <i>Diploma III (D3) in Informatics Engineering</i>	Batam, Indonesia 2024 – Present

WORK EXPERIENCE

BP Batam <i>Archive Document Control Intern</i>	Batam, Indonesia January 2024 – April 2024
---	--

- Managed and organized land archive documentation systematically for administrative and operational purposes.
- Assisted in digital and physical document classification to improve archive accessibility and management efficiency.
- Developed a DBMS-based archive management application as a competency examination and final school project with a case study focused on archive data management systems.

LPK Global Lentera Kasih <i>Administrative Staff</i>	Batam, Indonesia June 2024 – November 2024
--	--

- Managed trainee participant documents and important institutional training records.
- Operated various computer software and digital administrative tools to support daily training activities efficiently.
- Developed understanding of office IT infrastructure, digital workflow organization, and electronic document management.

PT Volex Indonesia <i>Production Operator</i>	Batam, Indonesia 2025 – Present
---	---

- Responsible for production processes and packing operations in manufacturing environments.
- Maintained product quality standards and ensured production accuracy during assembly operations.
- Worked with assembly workflows for EV charging cable products and related electronic manufacturing processes.
- Operated computer systems for managing production distribution, order tracking, and part number management.

SKILLS

- **Software Development Fundamentals:** Understanding of SDLC concepts, backend logic, responsive UI development, and clean code principles for building structured applications.
- **Machine Learning Fundamentals:** Basic understanding of ML workflows including data preprocessing, model training, evaluation, and experimentation.
- **IT Operations & Infrastructure:** Handling of foundational IT environments, covering hardware diagnostics, basic networking, troubleshooting, and digital workflow management
- **Deployment & Collaboration:** Experience with version control, command-line environments, and standard system planning processes.
- **Professional & Adaptive Skills:** Adaptable to evolving work environments and possessing intermediate English proficiency for professional communication.

ACADEMIC PROJECTS

Archive Management System (DBMS Project) *Final Competency Examination Project (2024)*

Designed and developed a database management system application for archive data management as part of a school competency assessment. Focused on data structure organization, CRUD operations, and administrative workflow efficiency.

Content Management System (CMS) *Semester 1 Project*

Developed a web-based CMS application for pet shop management with a focus on CRUD functionality, database structure planning, and interface usability.

Web-Based CMS Application *Semester 2 Project*

Built a modern CMS application emphasizing a maintainable backend structure, responsive user interface, and relational database management.

Machine Learning Testing & Optimization *Semester 3 Project*

Conducted experiments in machine learning model testing and optimization while learning model evaluation techniques and performance analysis.

PERSONAL INTERESTS

- Software Engineering
- Web Application Development
- Machine Learning
- System Planning & Architecture
